

I-COVER

by KLAY EnerSol

Removable Insulation Jackets

Removable Insulation Jackets provide an effective and easy to install solution for industrial insulation requirements. They are engineered to optimize energy savings and provide a safe operating environment for the personnel on-site. The jackets are fabricated to fit virtually any shape and location, and are durable against severe operating environmental conditions. Furthermore, the jackets are reusable hence allowing long term savings for the customer.

I-Cover Jackets are fabricated by securing selected insulation material between high temperature resistant fabrics. Additional fasteners are then added onto the jacket to help install and secure it onto the process equipment. **I-Cover** is a reliable alternative to conventional insulation in the petroleum, petrochemical, power generation, marine and other industries.

5 Key BENEFITS

Removable insulation covers can be reused multiple times after every inspection and maintenance, online or during turnarounds.

Easy to install and remove, even on complex shapes or in space constrained areas.

Significant energy savings with insulation of critical components.

Ensures safety of personnel against hot surfaces. Reduced exposure to loose fibers during handling and installation.

Reduced labor cost due to simple installation process in comparison to conventional insulation. No disposal or replacement insulation costs either.
